

AEGIS DISASTER SITUATION BULLETIN

Inundation footprint report for coordinates: 45.5945°N, -122.4411°E

LOCATION: Southwest Utah
DATE GENERATED: August 31, 2026
MODEL CONFIDENCE: 85.0%
CLASSIFICATION: Flood Inundation (CRITICAL SEVERITY)

1. INUNDATION FOOTPRINT ANALYSIS

- Flooded Surface Area: 1.06 sq km
- Estimated Residents Affected: 1,219 people
- Inundated Buildings/Footprints: 42 structures
- Critical Facilities At Risk: 1 units
- Flow Direction Trend: Downhill downstream flow warning

2. Ground Impact Narrative Summary

Based on real-time SegFormer satellite image classification, Southwest Utah shows active flood inundation covering approximately 1.06 sq km. Meteorological gauges indicate elevated runoff velocity. Emergency rescue operators should prioritize the safe evacuation of the estimated 1,219 residents in low-lying zones immediately.

3. Evacuation Directives & Emergency Helplines

3.1. Survival Guidelines

- 1. Disconnect main power switches inside inundated buildings.
- 2. Elevate critical food stocks, drinking water, and medicine packs to high shelves.
- 3. Do not walk, wade, or drive through moving flood waters.
- 4. Keep listening to local weather forecasts and Aegis push alerts.

3.2. Identified Closest Safe Shelters

- Central Town Government High School Shelter — Capacity: Active
- Community Stadium Sports Complex Relief Camp — Capacity: Open

3.3. State Emergency Support Line Contacts

NATIONAL DISASTER RESPONSE FORCE (NDRF):	011-24363260 / +91-9711077372
STATE DISASTER MANAGEMENT AGENCY (SDMA):	1070 / ASDMA Helpline

WARNING NOTICE: fast-moving water is extremely hazardous.

Avoid standing on bridges over swollen rivers. Seek official rescue boat routing.
